Do you agree with the defintion for long paper submission accepted as short papers as "good ideas without strong evaluation" ?
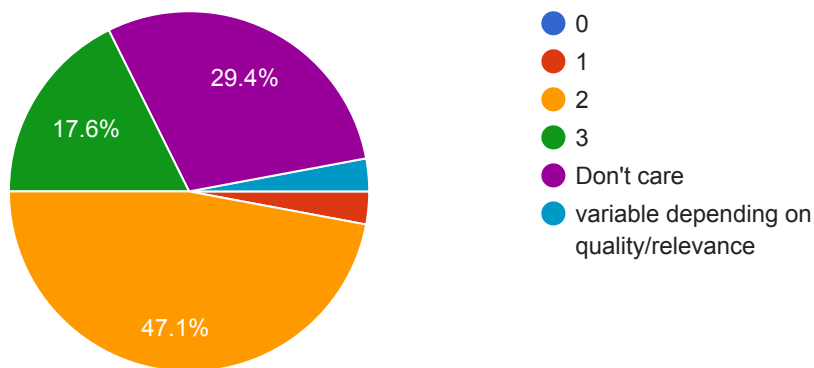

34 responses

- ● Yes
- ● No
- ● I don't want SSBSE to accpet long papers as short papers
- ● Downgrading papers considered harmful: http://onlinelibrary.wiley.com/doi/…
- ● This is one valid reason. There are others. e.g. not novel enough

How to make SSBSE more attractive to senior researchers ?

10 responses

Do not know

more wine

There can be a proposal track where people would just talk about proposals and challenges. Even a negative result track and a track with all the things that don't work.

Do we need to do that?

Perhaps having something like ICSE, i.e., the most influential paper award.

This is a really hard question. Maybe providing more info about the special issue and increasing the number of papers accepted to the special issue could be a good idea.

Consider becoming a track at a major conference.

special issue in top journal (TSE, TEVC,...)

Unsure

Include presentations about industrial applications

How to make SSBSE more attractive to junior researchers ?

15 responses

healthy representation on PC/organizing committee (pretty good in this regard already)

more funding support

There can be a proposal track where people would just talk about proposals and challenges. Even a negative result track and a track with all the things that don't work.

more tutorials

More challenge track opportunities (e.g., multiple challenge track topics)

doctoral symposium/student research track?

Having tutorials/keynotes targeting undergraduate and graduate students: people who never worked or studied SBSE techniques but would like to learn it

By given them awards when they actually attend SSBSE.

This is opposite to what I said before, but if we want more junior researchers to be involved then we need to have at least a full tutorial day.

Provide travel stipends.

challenges, tutorials, awards

bring more senior researchers

A competition track to solve a problem using SBSE techniques with some prize for the best performing solution.

Tutorial and demos

Have it located at nice venues/cities
